

AGHOSH PR

Python Full Stack Developer

Kerala — aghoshpr03@gmail.com — +91 9072185533

LeetCode — LinkedIn — GitHub

PROFILE SUMMARY

Python Full Stack Developer with hands-on experience building scalable web applications using **Django, FastAPI, and React**. Strong in developing **secure REST APIs**, real-time features using **WebSockets**, and asynchronous systems with tools like **Celery, Redis, and aiohttp**. Experienced in integrating payment gateways and designing data-driven solutions including web scraping systems. Focused on writing clean, maintainable code and solving real-world problems through practical development.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript
- **Frontend / Libraries:** HTML, CSS, Bootstrap, Tailwind CSS, React, Redux
- **Backend / Frameworks:** Django, Django REST Framework, FastAPI, WebSockets (Django Channels)
- **Async Caching:** Celery, Redis, AsyncIO, aiohttp
- **Web Scraping:** BeautifulSoup, Dynamic CSS Selector-based scraping
- **Databases:** MySQL, MongoDB, AWS RDS
- **DevOps / Cloud:** Docker, CI/CD Pipelines, AWS EC2, AWS RDS, AWS S3
- **Integrations:** Stripe, Razorpay, Google OAuth, Cloudinary, Socket.IO
- **Tools:** Git, GitHub, Postman, VS Code, Figma
- **Concepts:** Data Structures, OOP, API Design, Authentication (JWT, OAuth), Role-Based Access Control (RBAC), Payment Integration

EDUCATION

Bachelor of Computer Application (BCA)

2021–2024

Mother Arts and Science College, Thrissur

PROFESSIONAL TRAINING

Python Full Stack Development — Brototype, Trivandrum

- Completed intensive full-stack training with hands-on experience in building real-world web applications using Django and React.
- Gained strong problem-solving skills through structured practice and implementation of complex features.

- Developed soft skills including teamwork, communication, and time management in a project-driven environment.
- Applied industry best practices such as version control, clean code principles, and deployment workflows.

PROJECTS

LearnBridge – Full Stack E-Learning Platform - Live Link

Completed

- Developed a full-featured **e-learning platform** supporting role-based access, course purchasing, live sessions, Q&A community, and AI-powered chatbot for doubt resolution.
- Designed and implemented **role-based architecture (Student, Teacher, Admin)** with secure authentication using **JWT** and **Google OAuth**.
- Built scalable backend services using **Django REST Framework**, including course management, coupon system, wallet integration, and payment processing (Razorpay/Stripe).
- Implemented **real-time features** such as live classes, chat, and notifications using **WebSockets**, along with background task processing using **Celery and Redis**.
- Containerized the backend using **Docker** and deployed on **AWS EC2** with a **CI/CD pipeline** to automate build, image push, and deployment workflows.
- Configured and managed **AWS RDS (MySQL)** for scalable and production-ready database hosting.
- **Tech Stack:** Python, Django, DRF, React, Redux, Docker, Redis, MySQL (AWS RDS), CI/CD
- **Deployment:** AWS EC2 (Dockerized Backend with CI/CD), Vercel (Frontend)
- **Repository:** GitHub Link

PodCraze – E-commerce Platform - Live Link

Completed

- Developed a full-featured **e-commerce platform** supporting product browsing, cart management, order processing, and secure checkout workflows.
- Designed backend system using **Django** with structured models for products, users, orders, and **inventory (stock) management**.
- Implemented **order lifecycle management**, including order placement, **return handling**, and order status tracking.
- Integrated **Razorpay payment gateway** with support for **payment retry on failure** and transaction verification.
- Built **OTP-based authentication** and an **admin dashboard** for managing users, products, orders, and stock updates.
- Containerized the application using **Docker** and deployed on **AWS EC2** with domain configuration for production access.
- **Tech Stack:** Python, Django, Bootstrap, MySQL, Docker
- **Deployment:** AWS EC2 (Dockerized)
- **Repository:** GitHub Link

MINI PROJECTS

Dynamic Web Scraper (FastAPI + React)

- Developed a full-stack web scraping application enabling users to extract data from any website using custom CSS selectors.
- Implemented asynchronous scraping using **aiohttp** for efficient and concurrent data fetching.
- Built RESTful APIs using **FastAPI** with request validation via **Pydantic**.
- Designed a dynamic scraping engine using **BeautifulSoup** with selector-based extraction for multi-site support.
- Developed a React-based frontend for real-time data visualization using Axios.
- Handled edge cases such as invalid selectors, empty inputs, and network failures.
- **Tech Stack:** FastAPI, React, aiohttp, BeautifulSoup
- **Repository:** GitHub Link

User Management System (FastAPI + React)

- Developed a **role-based user management system** with Admin and User modules using FastAPI and React.
- Implemented secure **JWT-based authentication** with password hashing using bcrypt.
- Built RESTful APIs for user registration, login, and protected admin operations.
- Designed **Admin dashboard** to manage users with features including **create, delete, block/unblock, and view users**.
- Implemented **role-based access control (RBAC)** ensuring only admins can access management endpoints.
- Configured Axios interceptors for **token-based authorization** and protected frontend routes.
- Structured backend using FastAPI with **SQLAlchemy models, Pydantic schemas, routers, and dependency injection**.
- **Tech Stack:** FastAPI, React (Vite), Redux Toolkit, MySQL, SQLAlchemy, JWT
- **Repository:** GitHub Link

Netflix Clone (React + Firebase)

- Built a responsive Netflix-style UI using **React** with dynamic movie listing and component-based architecture.
- Integrated **Firebase** for data handling and real-time updates.
- Focused on UI/UX design, responsiveness, and structured layout.
- **Tech Stack:** React, Firebase
- **Repository:** GitHub Link

AI Chatbot (Django + Cohere API)

- Developed a web-based chatbot using **Django** integrated with Cohere API for real-time conversational responses.
- Implemented dynamic message handling with error management and optimized response processing.
- **Repository:** GitHub Link
